

Imię i nazwisko:

1. (6 points) In a group of 25 high school students, 14 students like maths and 9 students like physics. The number of students who like both subjects is **half** the number of students who don't like either of the two subjects.
 - (a) Represent the above information on the Venn diagram.
 - (b) What percentage of students like both subjects?
 - (c) What percentage of students like exactly one of the two subjects?

2. (6 points) For the following data set:

1, 2, 6, 3, 2, 2, 7, 4, 5, 4, 5, 11, 2, 7

write down:

- i. mode,
- ii. mean,
- iii. median,
- iv. interquartile range

A new element x has been added to the data set. x is unknown. Write down which of the above statistics will certainly **not** change. Justify your answer.

3. (8 points)

If $m = \log_x 4$ and $n = \log_x 3$ find an expression, in terms of m and n , for:

- i. $\log_4 3$,
- ii. $\log_x 12$,
- iii. $\log_x(2\sqrt{3})$,
- iv. $\log_4 \frac{4x}{3}$.

4. (6 points) Consider the expansion of $\left(2x + \frac{1}{x^2}\right)^7$
- (a) Write down the number of terms in this expansion.
 - (b) Write down the general term of the expansion.
 - (c) Find the coefficient of x .

5. (10 points) The graph of the function $f(x)$ is shown below.

- (a) State the domain and range of f .
- (b) On the same diagram draw the following functions:
- $g(x) = f(x + 2) + 1$,
 - $h(x) = f\left(\frac{1}{2}x\right)$,
 - $j(x) = \frac{1}{2}f(x)$,
- (c) Find the values of
- $(f \circ f)(2)$,
 - $(f \circ f)(-2)$

6. (10 points) Let $f(x) = kx^2 + 12x + 5$, where k is a constant.
- (a) Find the set of values of k for which the graph of f intersects the x -axis twice.

Let $k = 2$.

- (b) Write $f(x)$ in the vertex form and state the coordinates of the vertex.
- (c) Sketch the graph of f on the set of axes below, clearly indicating the x and y intercepts.

Let $g(x) = x + 1$.

- (d) Solve $f(x) = g(x)$.
- (e) Add the graph of $g(x)$ to your diagram. Mark the points of intersections of the graphs of the two functions and state the coordinates of these points.
- (f) Write down the set of values of x for which $g(x) > f(x)$.

7. (8 points) Consider the points $A(-1, -2)$, $B(3, 1)$ and $C(1, 2)$.
- (a) Find the gradient of the line through A and C .
 - (b) Find the gradient of the line through B and C .
 - (c) Hence show that the triangle ABC is a right triangle.
 - (d) Find the area of $\triangle ABC$.
 - (e) Let M be the mid-point of AB . Show that the triangles AMC and CMB are isosceles.

8. (6 points) 600 metres of fencing is used to construct 6 rectangular animal pens as shown.

- (a) Find the formula for the area of each pen in terms of x .
- (b) Find the dimensions of each pen so that it has the maximum possible area.
- (c) Find the total area of the whole enclosure for which each pen is of maximum area.

9. (10 points) Consider the function $f(x) = \frac{2x + 4}{x - 3}$.

(a) Write down the equations of horizontal and vertical asymptotes of f .

The graph of f has been translated by the vector $\begin{pmatrix} 1 \\ -5 \end{pmatrix}$ to form a graph of g .

(b) Write down the equation of $g(x)$ in the form $\frac{ax + b}{cx + d}$.

(c) Write down the equations of horizontal and vertical asymptotes of g .

(d) Sketch both f and g on the set of axes below.

(e) Mark the points where the graphs intersect.

(f) Solve $f(x) = g(x)$ algebraically.

10. (10 points) Let $f(x) = 3x + 1$ and $g(x) = \frac{x + 2}{4}$.
- (a) Find the expressions for $f^{-1}(x)$ and $g^{-1}(x)$.
 - (b) Find the expressions for $(f \circ g)(x)$ and $(g \circ f)(x)$.
 - (c) State the gradients of f and g .
 - (d) Find an equation of the line l which is parallel to the graph of f and passes through $(1, 0)$.
 - (e) Find an equation of the line l which is perpendicular to the graph of g and passes through $(2, -3)$.
