# 10 Geometry and trigonometry 2

## CHAPTER OBJECTIVES:

- **5.4** Geometry of three-dimensional solids; distance between two points; angle between two lines or between a line and a plane
- 5.5 Volumes and surface areas of three-dimensional solids

## **Before you start** You should know how to:

**1** Use trigonometry in a right-angled triangle, e.g.

$$A^{C} = \frac{3}{AC}$$

$$A^{C} = \frac{3}{\sin 32^{\circ}}$$

$$A^{C} = \frac{3}{\sin 32^{\circ}}$$

$$A^{C} = 5.66 \text{ cm } (3 \text{ sf })$$

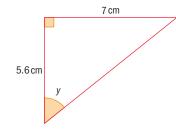

- **2** Find an angle, a side or the area of any triangle, e.g.
  - a using the cosine rule  $c^{2} = a^{2} + b^{2} - 2ab \cos C$ : A  $\cos \hat{C} = \frac{6.8^{2} + 5^{2} - 10^{2}}{2 \times 6.8 \times 5}$   $\cos \hat{C} = -0.4229...$  $\hat{C} = 115^{\circ}(3 \text{ sf})$

## **Skills check**

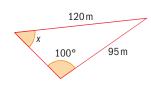

**1 a** Find *x* in this triangle.

**b** Find angle *y*.

- **2** In this triangle
  - **a** find the angle *x*
  - **b** find the area.

**b** using the formula

$$A = \frac{1}{2} ab \sin C$$
$$A = \frac{1}{2} \times 6.8 \times 5 \times \sin 115^{\circ}$$
$$= 15.4 \text{ cm}^2$$

420

Goods are transported all around the world in containers like this. These cuboid-shaped metal boxes come in uniform sizes, so they can be moved from lorry to train to ship using standard equipment.

A company using containers for transport needs to work out how many of their products will fit into one container, and so how many containers they will need. They might need to calculate the maximum possible length of pipe that would fit into a container, on the diagonal.

A company manufacturing containers needs to know how many square metres of metal are needed to make each container.

In Chapter 5 you used geometry and trigonometry to solve problems in two dimensions. In this chapter you will learn how to calculate lengths and angles and solve problems in three dimensions.

## 10.1 Geometry of three-dimensional solids

Geometry is the study of points, lines, planes, surfaces and solids.

No dimensions	One dimension	Two dimensions	Three dimensions	
point	line	plane	solid	
•				
Can you draw a p with no dimension			A <b>plane</b> is a flat surface.	
	make u A face	faces of a solid together up the <b>surface</b> of the solid. of the solid may be <b>plane</b> or . A cuboid has 6 plane faces.	<b>Euclid - the 'father of</b> <b>geometry'</b> Euclid (c325–c265 BCE) founded a school	
	two fac has 12	ge is a line segment where ces of a solid meet. This cuboid 2 edges. The edges form the work of the solid.	of mathematics in Alexandria, Egypt, and wrote thirteen volumes of <i>The Elements of</i> <i>Geometry</i> . These	
		<b>tex</b> is a point where three or edges meet. This cuboid has 8 s.	were the standard mathematics textbook for over 2000 years.	
There are two g				

There are two groups of solids:

- Solids with all faces **plane**:
  - prisms
  - pyramids

• Solids with at least one **curved** face, e.g. cylinder, cone, sphere

## **Right prisms**

→ In a right prism the end faces are the same shape and size and are parallel. All the other faces are rectangles that are perpendicular to the end faces.

This is a right prism.

422

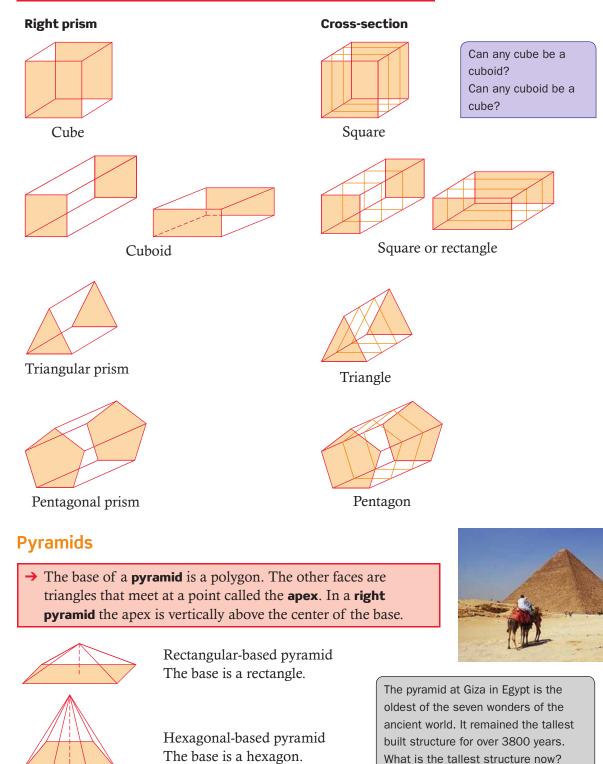

This is **not** a right prism. The end faces are not perpendicular to the other faces.

#### Remember that

two figures with the same shape and size are said to be **congruent**. In a prism the end faces are congruent.

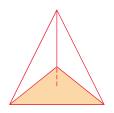

In Mathematical Studies you will only study right prisms.

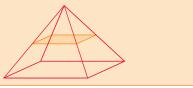

How has mathematics been used in

its design?

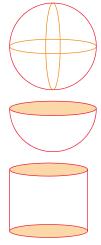

Triangular-based pyramid The base is a triangle. The **cross-sections** parallel to the base of a pyramid are the same shape as the base, but different sizes.

## Solids with at least one curved face

In these solids the plane faces are shaded.

Vertex or apex

A **sphere** has one curved face.

A **hemisphere** has two faces, one plane and one curved.

A **cylinder** has three faces, two plane and one curved.

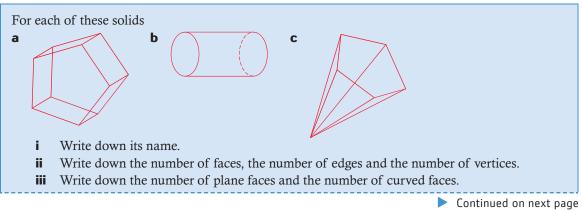

A **cone** has two faces, one plane and one curved.

In Mathematical Studies you only study **right cones**. In a right cone the apex is vertically above the center of the base. In a right cone:

- the **vertical height** *h* is the distance from the apex to the center of the base
- the slant height / is the distance from the apex to any point on the circumference of the base.

h 0

## Example 1

Answers						
i		a Pentagonal prism	b Cylinder	c Pentagonal-based pyramid		
ii	Faces	7	3	6		
	Edges	15	2	10		
	Vertices	10	0	6		
iii	Plane faces	7	2	6		
	<b>Curved faces</b>	0	1	0		

## Investigation – drawing a prism

Step 1 Draw one of the end faces.

Step 2 Draw the other end face. Remember that the end faces are congruent.

Step 3 Join up corresponding vertices with parallel lines.

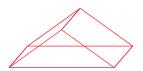

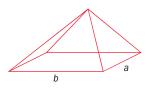

Now use this method to draw a triangular prism.

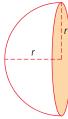

## **Exercise 10A**

а

**1** For each of these solids

С

- i Write down its name.
- **ii** Write down the number of faces, the number of edges and the number of vertices.

b

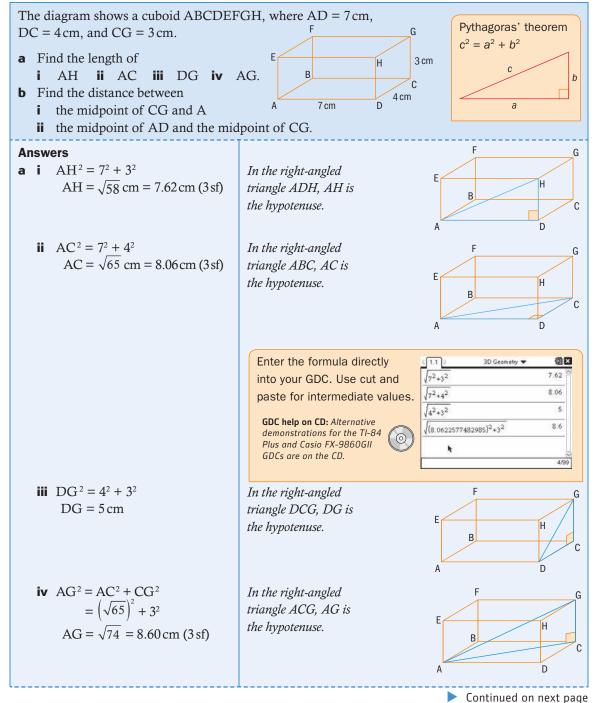

- **iii** Write down the number of plane faces and the number of curved faces.
- **2** Draw prisms with these end faces.

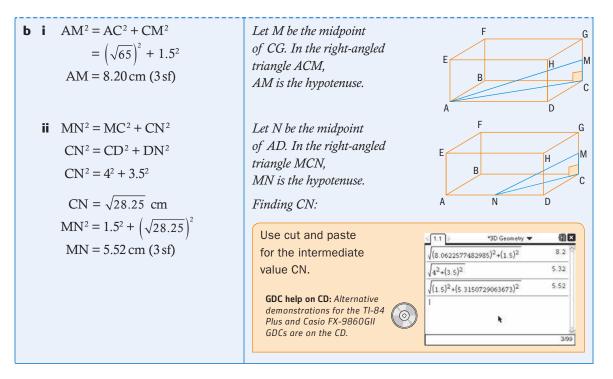

## 10.2 Distance between points in a solid

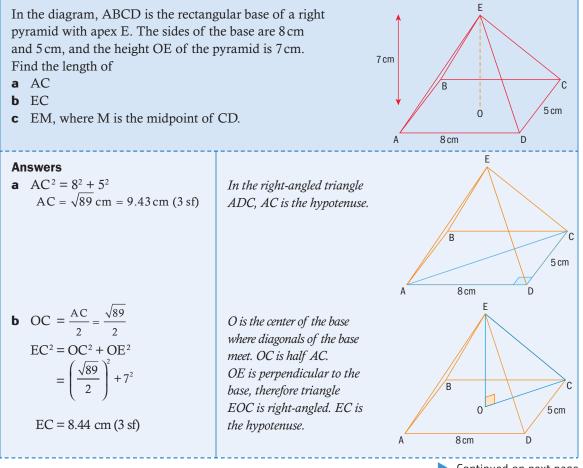

You might need to calculate the distance between two vertices in a solid, or the distance between a vertex and the midpoint of an edge, or the distance between the midpoints of two lines. To do this you need first to identify right-angled triangles and then use Pythagoras' theorem.

## Example 2

#### **Example 3**

Continued on next page

## **Exercise 10B**

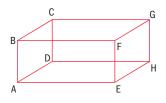

- Copy the cuboid shown in the diagram. In different sketches mark clearly these right-angled triangles:
  - a triangle ACD
  - **b** triangle AGH
  - **c** triangle HBA
  - d triangle MCD, where M is the midpoint of EH.
- **2** Copy the right pyramid shown in the diagram. In different sketches mark clearly:
  - **a** triangle BCD
  - **b** triangle EOC
  - c triangle EOM, where M is the midpoint of CD.

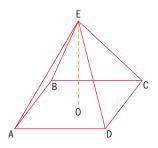

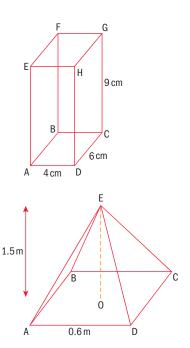

- **3** The diagram shows a cuboid ABCDEFGH, where AD = 4 cm, CD = 6 cm and CG = 9 cm. Find the length of
  - a DB
  - **b** ED
  - c DG
  - d DF.
- 4 The diagram shows a square-based pyramid.E is vertically above the middle of the base, O.The height of the pyramid is 1.5 m.The sides of the base are 0.6 m.Find the length of
  - a AC

. . . . . . . . . . . . . . . .

- b ED
- c EM, where M is the midpoint of CD.

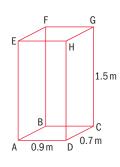

5 The diagram shows a cone with base center O and radius 4 cm. The slant height of the cone is 9 cm. Find OV, the height of the cone.

- **6** The diagram represents a cupboard in a gym. It has the dimensions shown.
  - **a** Calculate the length of AC.
  - **b** Find the length of the longest fitness bar that can fit in the cupboard.

The longest length in a cuboid is the diagonal.

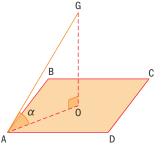

9 cm

4 cm

0

Sketch the pyramid and label the lengths you know.

The angle between the plane ABCD and the line AG is also the angle between the lines OA and AG.

# 7 The Great pyramid of Giza has a square base. At the present time the length of one side of the base is 230.4 m and the height is 138.8 m.

- **a** Calculate the length of the base diagonal.
- **b** Calculate the distance from the apex to the midpoint of a side of the base.
- **c** Calculate the length of one sloping edge of the pyramid.

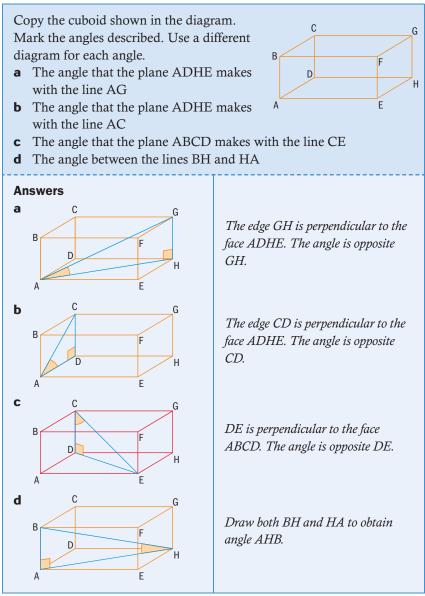

## 10.3 Angles between two lines, or between a line and a plane

To calculate angles start by identifying right-angled triangles. Then use trigonometry.

In the diagram, ABCD is a plane and AG is part of a line. To find the angle  $\alpha$  that AG makes with the plane ABCD:

- **1** Drop a perpendicular from G to the plane.
- **2** Label the point where the perpendicular meets the plane.
- **3** Draw the right-angled triangle AOG. Angle  $\alpha$  is opposite OG.
- **4** Use trigonometry to find  $\alpha$ .

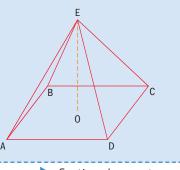

## Example 4

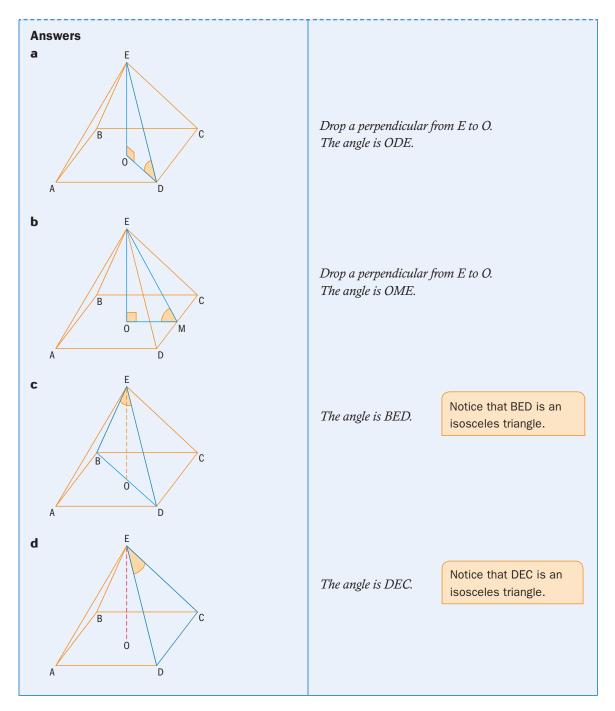

## **Example 5**

Copy the diagram of a rectangular-based pyramid. E is vertically above the middle of the base, O. Mark the angles described. Use a different diagram for each angle.

- **a** The angle that the base ABCD makes with the edge DE
- **b** The angle that the base ABCD makes with ME, where M is the midpoint of CD
- **c** The angle between the lines BE and ED
- **d** The angle between the lines DE and EC

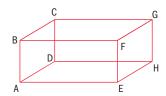

Continued on next page

## Exercise 10C

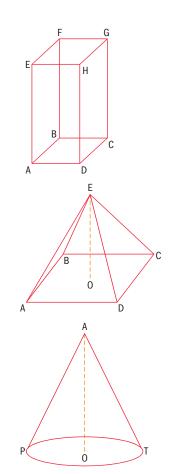

- Copy the cuboid shown and mark the angles described. Use a different diagram for each angle.
  - **a** The angle that the face ADHE makes with the line EG
  - ${\bf b}$   $\,$  The angle that the face ADHE makes with the line EC  $\,$
  - ${\bf c}$   $\,$  The angle that the face EFGH makes with the line CE  $\,$
  - **d** The angle between the lines CE and CF
  - e The angle between the lines CE and EA

- **2** Copy the cuboid and mark the angles described. Use a different diagram for each angle.
  - **a** The angle between the face AEHD and DG
  - **b** The angle between the face AEHD and DF
  - ${\bf c}$   $\,$  The angle between the lines CF and CA  $\,$
  - **d** The angle between the lines AH and HG
- **3** Copy the diagram of a square-based right pyramid. Mark the angles described. Use a different diagram for each angle.
  - **a** The angle between the base of the pyramid and the edge EC
  - **b** The angle between the edges EC and AE
  - **c** The angle between the line ME and the base, where M is the midpoint of CD
- 4 The diagram shows a right cone with base center O. A is the apex. T and P are on the circumference of the base and O is the midpoint of PT.

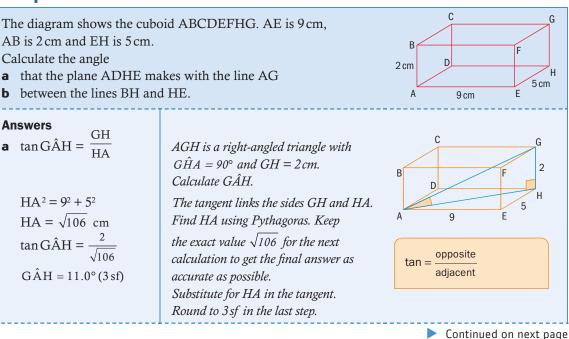

On a copy of the diagram mark these angles. Use a different diagram for each angle.

- **a** The angle that the sloping edge AT makes with the base
- **b** The angle that the sloping edge AT makes with PT. What is the relationship between this angle and the angle described in part **a**?
- **c** The angle between the sloping edges AT and AP. What type of triangle is PAT?

### **Example 6**

432

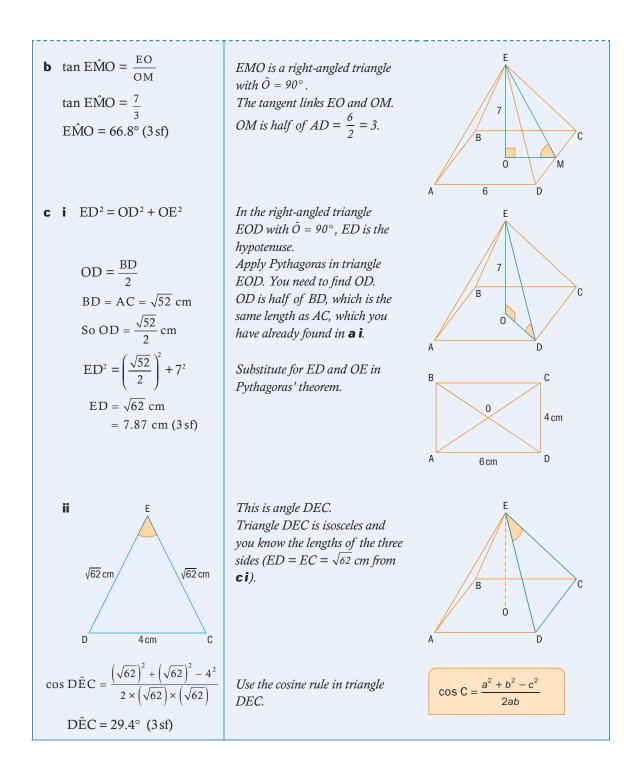

**b** 
$$\tan B\hat{H}E = \frac{BE}{EH}$$
  
 $As BCHE is a rectangle, triangle BEH
is right-angled.
 $So BEH is a right-angled triangle with$   
 $B\hat{E}H = 90^{\circ}$ . Calculate angle BHE.  
The tangent links the sides BE and EH.  
 $Find BE using Pythagoras.$   
 $BE = \sqrt{85} \text{ cm}$   
 $\tan B\hat{H}E = \frac{\sqrt{85}}{5}$   
 $B\hat{H}E = 61.5^{\circ} (3sf)$$ 

## Example 7

囲

The diagram shows the right pyramid ABCDE. The base is a rectangle with AD = 6 cm and CD = 4 cm. The height of the pyramid is 7 cm. 7 cm **a** i Calculate angle AEO. ii Calculate angle AEC. **b** Calculate angle EMO, where M is the midpoint of CD. 4 cm 0 **c** i Calculate the length of ED. ii Hence calculate angle DEC. 6 cm D А Answers **a** i  $\tan A \hat{E} O = \frac{AO}{EO}$ F AOE is a right-angled triangle with  $\hat{O} = 90^{\circ}$ . We are looking for angle AEO. The tangent links AO (half of AC) and EO, the height.  $AC^2 = 6^2 + 4^2$ Find AC using Pythogoras and then halve it.  $AC = \sqrt{52} \text{ cm}$  $AO = \frac{\sqrt{52}}{2} cm$ 6 D Δ  $\tan A \hat{E} O = \frac{\sqrt{52}}{2}$ Substitute for AO and EO in the tangent. E  $A\hat{E}O = 27.3^{\circ} (3 \text{ sf})$ Triangle AEC is isosceles, so EO is **ii**  $A\hat{E}C = 2 \times A\hat{E}O$ a line of symmetry.  $= 2 \times 27.252...$ EO bisects angle AEC.  $\hat{AEC} = 54.5^{\circ} (3 \text{ sf})$ So AÊC is twice AÊO. Α D

## **Exercise 10D**

#### EXAM-STYLE QUESTIONS

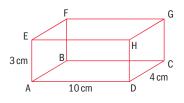

- In the cuboid ABCDEFGH, AD = 10 cm, CD = 4 cm and AE = 3 cm.
  - **a** i Calculate the length of AC.
    - ii Calculate the angle that AG makes with the face ABCD.
  - **b** i Calculate the length of AF.
    - ii Find the angle that the face AEFB makes with the line AG.
- **2** The diagram shows cube ABCDEFGH with side length 2 m.
  - **a** Calculate the length of BD.
  - **b** Find the angle that DF makes with the face ABCD.

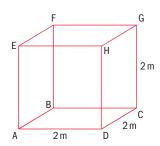

Let M be the midpoint of BF.

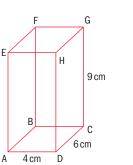

- c Find the angle that MD makes with the face ABCD.
- **3** The diagram shows a cuboid ABCDEFGH, where AD = 4 cm, CD = 6 cm and CG = 9 cm.
  - **a** i Calculate the length of BD.
    - ii Find the angle that AF makes with the face BFGC.
  - **b** Find the angle that AF makes with the face ABCD.
  - **c** i Calculate the length of AC.
    - ii Calculate the length of FC.
    - iii Find the angle between the lines AF and FC.

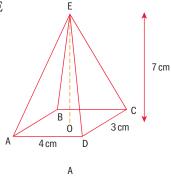

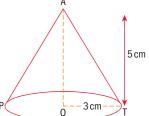

- **a** Find the length of AC.
- **b** Find the length of AE.
- **c** Find angle AEC.
- **d** Find the angle that AE makes with the base of the pyramid.
- Find the angle that the base of the pyramid makes with EM, where M is the midpoint of CD.
- **5** The diagram shows a cone with base center O and radius 3 cm. A is 5 cm vertically above O. T and P are on the circumference of the base and O is the midpoint of PT.
  - **a** Find AT, the slant height of the cone.
  - **b** Find the angle that AT makes with the base of the cone.
  - **c** Find angle PAT.

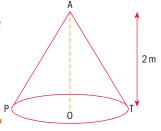

#### EXAM-STYLE QUESTION

- 6 A beach tent has the shape of a right cone. The center of the base is O and the base area is 5 m<sup>2</sup>. The tent is 2 m high. It is attached to the sand at points P and T, and O is the midpoint of PT.
  - **a** Find the radius of the base.
  - **b** Find angle PAT.

## 10.4 Surface areas of three-dimensional solids

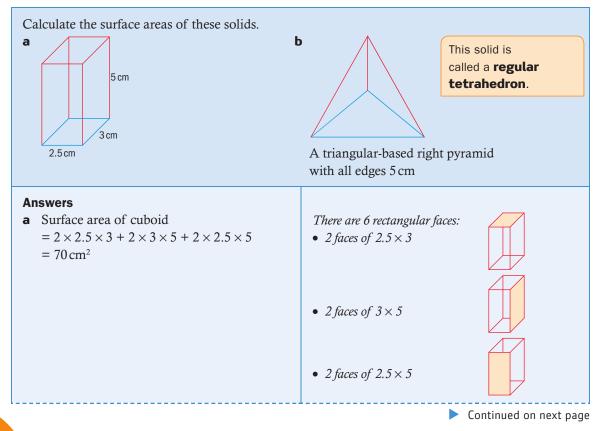

→ The surface area of a solid is the sum of the areas of all its faces. Surface area is measured in square units, e.g. cm<sup>2</sup>, m<sup>2</sup>. To calculate surface areas, first sketch the solid.

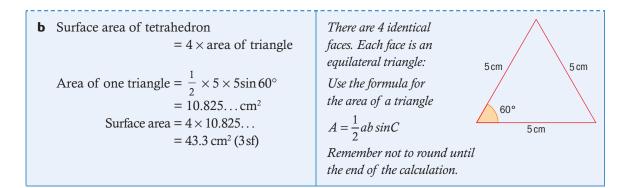

There are two types of solid:

- Solids with all their faces plane e.g. prisms (except cylinders), pyramids (except cones), or combinations of these
- Solids with at least one curved face e.g. cylinders, spheres, hemispheres, cones, or combinations of these

## Surface areas of solids with all faces plane

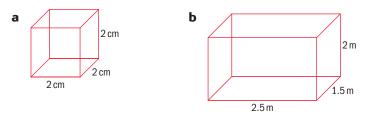

## Example 8

## **Exercise 10E**

**1** Calculate the surface areas of these solids.

**c** ABCDEF is a prism. CF is 5 cm and triangle ABC is equilateral with sides 4 cm.

#### EXAM-STYLE QUESTIONS

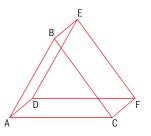

- **2** ABCDEF is a right prism. BE is 4 cm, and triangle ABC is isosceles with AC = CB = 3 cm and angle BCA = 120°.
  - **a** Find the area of triangle ABC.
  - **b** Find the length of the edge AB.
  - **c** Find the surface area of the prism.

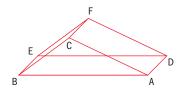

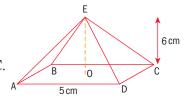

- a Calculate the length of EM, where M is the midpoint of BC.
- **b** Calculate the area of triangle CDE.
- **c** Calculate the surface area of the pyramid.
- **4** The surface area of a cube is 600 m<sup>2</sup>. Calculate its side length. Give your answer in cm.

#### EXAM-STYLE QUESTION

- **5** Each edge of a cube is 5.4 m.
  - **a** Calculate the surface area of the cube.
  - **b** Give your answer to part **a** in the form  $a \times 10^k$ 
    - where  $1 \le a < 10, k \in \mathbb{Z}$ .

#### EXAM-STYLE QUESTION

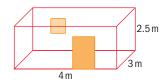

**6** The diagram represents Jamal's room, which is in the shape of a cuboid. He is planning to paint all the surfaces except the floor, the door and the window.

The door is 2 metres high and 1.3 metres wide, and the window is a square with a side length of 1 metre.

- **a** Calculate the surface area that Jamal intends to paint. Jamal needs 1.2 litres of paint to cover  $1 \text{ m}^2$ .
- **b** Calculate the number of litres of paint that Jamal needs. Round **up** your answer to the next whole litre.

One litre of paint costs US\$4.60.

**c** Calculate how much Jamal will spend on paint. Give your answer correct to 2 decimal places.

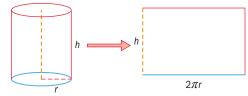

Round up your answer to the next whole number as you buy paint in litres.

## Surface areas of solids with at least one curved face

#### • Cylinder

A cylinder has three faces: one curved and two plane. If you cut the curved face and open it out, you get a rectangle. The length of the rectangle is the circumference of the base of the cylinder.

If h is the height and r is the radius of the base

→ Area of curved surface of a cylinder =  $2\pi rh$ 

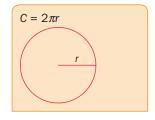

Area of a circle =  $\pi r^2$ 

The cylinder has two equal circular faces

Area of two circles =  $2\pi r^2$ 

Therefore

→ Total surface area of a cylinder =  $2\pi rh + 2\pi r^2$ 

This formula is in the Formula booklet.

Was  $\pi$  invented or discovered? When was it first used? Why is it denoted with a Greek letter?

438

#### • Sphere

A sphere has one curved face.

Let *r* be the radius of the sphere, then

#### • Cone

A cone has two faces: one plane and one curved.

Let *r* be the radius and *l* the slant height of the cone, then

b

6 cm

 $\rightarrow$  Area of curved surface of a cone =  $\pi rl$ 

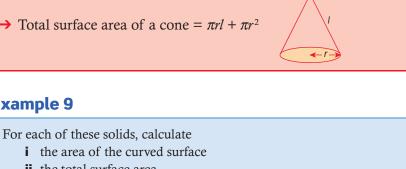

This formula is in the Formula booklet.

This formula is in the Formula booklet.

The base of a cone is a circle, therefore

→ Total surface area of a cone =  $\pi rl + \pi r^2$ 

8 cm

ii the total surface area.

5 cm

4 cm

Answers

**Example 9** 

а

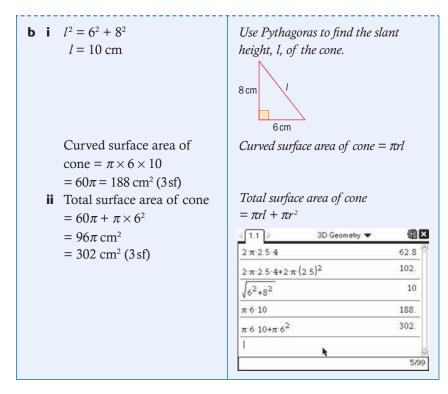

**a i** Area of curved surface  $= 2\pi \times 2.5 \times 4$  $= 20\pi = 62.8 \text{ cm}^2 (3 \text{ sf})$ ii Area of two circular faces  $= 2\pi \times 2.5^2$ 

 $= 39.26... \text{ cm}^2$ Total surface area of cylinder = 62.8... + 39.26...  $= 102 \text{ cm}^2 (3 \text{ sf})$ 

Area of curved surface of cylinder  $= 2\pi rh$ *Base radius* = 2.5 cm *Total surface area* =  $2\pi rh + 2\pi r^2$ 

Continued on next page

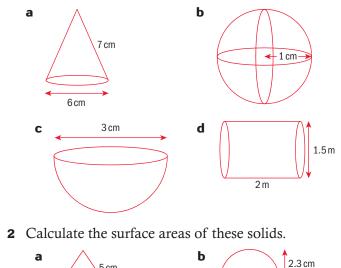

**GDC help on CD:** Alternative demonstrations for the TI-84 Plus and Casio FX-9860GII GDCs are on the CD.

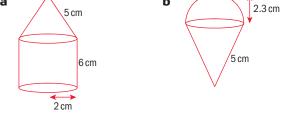

### **Exercise 10F**

#### EXAM-STYLE QUESTIONS

**1** Calculate the surface area of each solid.

**3** The surface area of a sphere is 1000 cm<sup>2</sup>. Find its radius.

Split each solid into two solids.

440

#### EXAM-STYLE QUESTION

- 4 The first diagram shows a cylindrical pencil container made of leather. The base diameter is 8 cm and the height is 13 cm.
  - **a** Calculate the area of leather needed to make this pencil container.

Another container is made in the shape of a cuboid as shown. The square base has sides of 7 cm. This container uses the same area of leather as the

cylindrical one.

**b** Find the height, *h*, of the cuboid. Give your answer correct to 2 significant figures.

## **10.5 Volumes of three-dimensional solids**

→ The volume of a solid is the amount of space it occupies and is measured in cubic units, e.g. cm<sup>3</sup>, m<sup>3</sup>, etc.

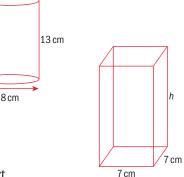

## Volume of a prism

To calculate the volume of a prism you need to know

- the area of the **cross-section** of the prism (the end face)
- the **height** (distance between the two end faces).

 $V = area of cross-section \times height$ 

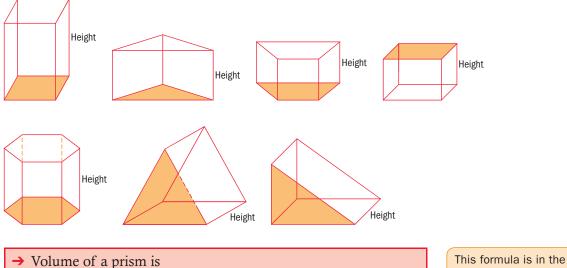

In each of the prisms shown one end face is shaded and the height is labeled.

#### **Remember that**

one cubic centimetre is the space occupied by a cube with edge length of 1 cm.

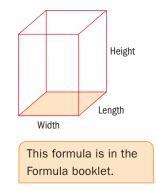

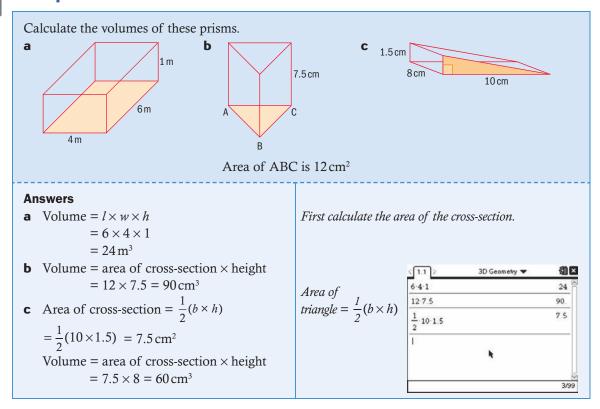

Formula booklet.

A cuboid is a prism with cross-section a rectangle. Volume of a cuboid = area of cross-section × height Area of cross-section = length × width so Volume of a cuboid = length × width × height

→ Volume of a cuboid is
 V = l × w × h,
 where l is the length, w is the width, h is the height.

#### **Example 10**

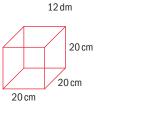

#### **Exercise 10G**

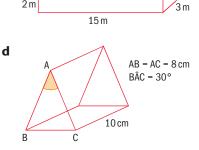

С

1.3 dm

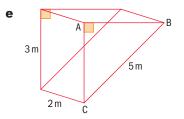

In part **a** the volume will be in  $dm^3$ .

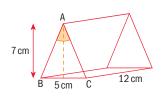

Geometry and trigonometry 2

442

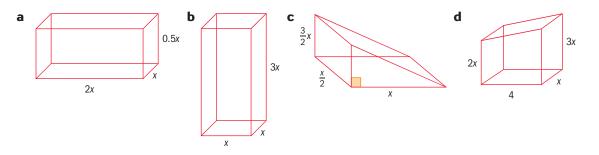

f

#### EXAM-STYLE QUESTIONS

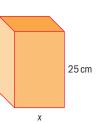

- 2 The diagram shows a triangular prism. Angle CAB =  $90^{\circ}$ .
  - **a** Calculate the length of AB.
  - **b** Calculate the area of triangle ABC.
  - **c** Calculate the volume of the prism.
- **3** The diagram shows a prism with ABCDEF a regular hexagon. Each side of the hexagon is 5 cm and the height of the prism is 13.5 cm. 13.5 cm.
  - **a** What size is angle COB?
  - **b** Find the area of triangle COB.
  - **c** Find the area of the regular hexagon ABCDEF.
  - **d** Find the volume of the prism.
- 4 Find expressions for the volume, V, of each of these prisms. Give answers in their simplest form.

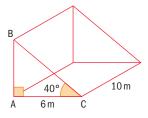

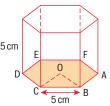

#### EXAM-STYLE QUESTION

- **5** A box with a square base has a volume of  $11025 \text{ cm}^3$ and a height of 25 cm. Each side of the base is x cm.
  - **a** Write down an expression in terms of *x* for the volume of the box.
  - **b** Hence write down an equation in *x*.
  - **c** Find the value of *x*.

What type of triangle is OCB?

#### EXAM-STYLE QUESTION

- 6 An open box is cubical in shape. It has no lid. The volume of the box is 9261 cm<sup>3</sup>.
  - **a** Find the length of one edge of the box.
  - **b** Find the total external surface area of the box.

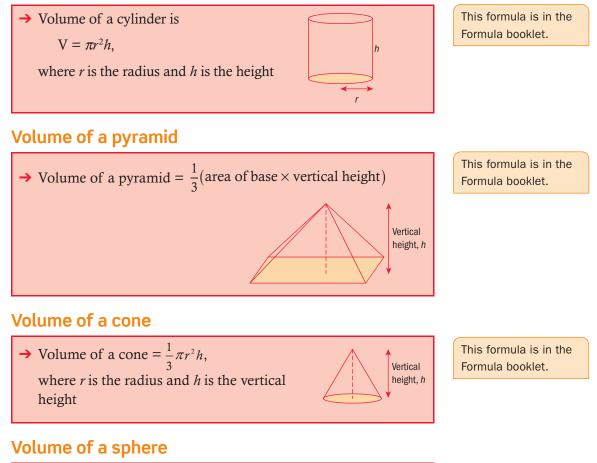

**Extension material on CD:** Worksheet 10 - Volume of a truncated cone

## Volume of a cylinder

A cylinder is a prism with a circular cross-section.

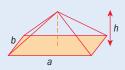

Volume of cylinder = area of cross-section × height

→ Volume of a sphere = 
$$\frac{4}{3}\pi r^3$$
,  
where *r* is the radius This formula is in the Formula booklet.

## Investigation – relationships between volumes

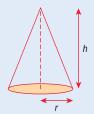

Write an expression for the volume of each solid. What do you notice?

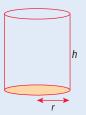

What can you say about the volume of a cuboid and the volume of a pyramid with the same base and height as that cuboid?

What is the relationship between the volumes of these two solids?

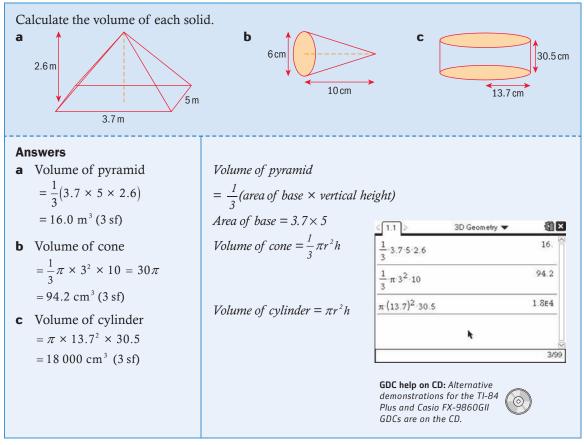

Take a cone and cylinder of the same height and radius. Fill the cone with rice. Pour it into the cylinder. How many times do you have to do this to fill the cylinder?

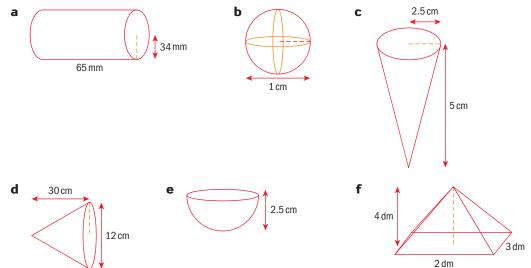

## Example 11

囲

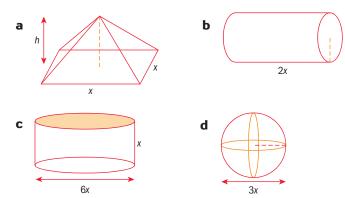

## Exercise 10H

**1** Calculate the volume of each solid.

#### EXAM-STYLE QUESTION

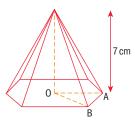

- **2** A cylindrical water tank has height 3 m and base radius 1.2 m.
  - **a** Calculate the volume of the tank in m<sup>3</sup>.
  - **b** Give your answer to part **a** in  $dm^3$ .
  - **c** Hence find, in litres, the capacity of the tank.
- **3** Find an expression for the volume, *V*, of each solid. Give each answer in its simplest form.

#### Capacity is the amount of liquid a container can hold when it is full.

#### EXAM-STYLE QUESTION

- The diagram shows a right pyramid with a regular hexagonal base.
   The volume of the pyramid is 84 cm<sup>3</sup> and the height is 7 cm.
   O is the center of the base.
  - **a** Calculate the area of the base.
  - **b** Calculate the area of triangle AOB.
  - **c** What size is angle AOB?
  - **d** Calculate the length of AB.

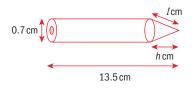

- **5** A spherical ball has a volume of 200 cm<sup>3</sup>.
  - **a** Find the radius of the ball.
  - **b** Give your answer to part **a** correct to the nearest mm.

#### EXAM-STYLE QUESTIONS

- 6 A cylindrical container has base radius 15 cm and height 30 cm. It is full of sand.
  - **a** Calculate the volume of sand in the container.

The sand is poured into a second container in the shape of a cuboid. The length of the cuboid is 60 cm, the width is 20 cm, and the height is 17 cm.

- **b** Is the second container big enough for all the sand? Justify your decision.
- 7 A cyclindrical pencil is 13.5 cm long with diameter 0.7 cm.It is sharpened to a cone as shown in the diagram.

The length of the cyclindrical part is now 12.3 cm.

The height of the cone is h cm and its slant height is l cm.

- **a** i Write down the value of *h*.
  - ii Find the value of *l*.
- **b** Hence find
  - i the total surface area of the pencil
  - ii the volume of the pencil.
  - Give your answers to 3 sf.

The pencils are packed in boxes. The boxes are cuboids of width 5.6 cm, height 1.4 cm and length 13.5 cm.

- **c** Show that the maximum number of pencils that will fit in the box is 16.
- **d** Find the space in a full box that is **not** occupied by the pencils.
- **e** Write your answer to part **d** as a percentage of the volume of the box. Give your answer correct to 2 sf.

Sketch the cone. Use Pythagoras to find *I*.

Sketch the box.

## **Review exercise**

## **Paper 1 style questions**

#### EXAM-STYLE QUESTIONS

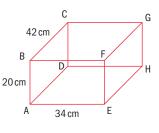

- **1** The cuboid ABCDEFGH is shown in the diagram. AB = 20 cm, BC = 42 cm and AE = 34 cm.
  - **a** Calculate the surface area of the cuboid.
  - **b** Calculate the volume of the cuboid, giving your answer in dm<sup>3</sup>.
- **2** The cuboid ABCDEFGH is shown in the diagram. AB = 5 cm, BC = 4 cm and AE = 10 cm.
  - **a** Calculate the length of AH.
  - **b** Calculate the angle that AG makes with the face ADHE.
- 3 The diagram shows a rectangular-based right pyramid ABCDE. The height of the pyramid is 8 cm. The base is 5 cm long and 4 cm wide.

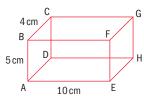

#### Calculate

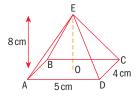

- **a** the length of AC
- **b** the length of EC
- **c** the angle AEC.
- 4 The diagram shows a square-based right pyramid ABCDE. The height of the pyramid is 9 cm. Each edge of the base is 6 cm. Calculate
  - **a** the distance between the midpoint of DC and E
  - **b** the area of triangle DCE
  - **c** the surface area of the pyramid.
- **5** The diagram shows a hollow cube ABCDEFGH. Its volume is 512 cm<sup>3</sup>.
  - **a** Write down the length of any edge of the cube.
  - **b** Find the distance AC.

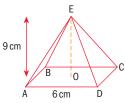

Rosaura puts a pencil in the cube. The pencil is 13.5 cm long.

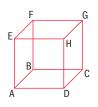

- **c** Does the pencil fit in the cube? Justify your decision.
- 6 A cone has the dimensions shown in the diagram. Point B is on the circumference of the base, point O is the center of the base and point A is the apex of the cone.
  - **a** Calculate the size of the angle that AB makes with the base of the cone.
  - **b** i Calculate the height of the cone.
    - ii Calculate the volume of the cone.

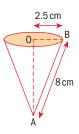

#### EXAM-STYLE QUESTION

- 7 The diagram represents a tent in the shape of a prism. The front of the tent, ABC, is an isosceles triangle with AB = BC = 2.4 m and  $ABC = 110^{\circ}$ . The tent is 3.5 m long.
  - **a** Calculate the area of the front face of the tent ABC.
  - **b** Calculate the space inside the tent.

## **Paper 2 style questions**

#### EXAM-STYLE QUESTIONS

- **1** An office tower is shown in the diagram. It consists of a cuboid with a square base and a square-based right pyramid.
  - **a** Calculate the distance from O to M, the midpoint of HG.
  - **b** Calculate the height of the tower.
  - c Find the angle that OM makes with the plane EFGH.

A cleaning services company charges US\$ 78 per  $m^2$  to clean the outside of a building.

- **d** Calculate the cost of cleaning the tower, giving your answer correct to the nearest US\$.
- **2** A solid sculpture consist of a hemisphere of radius 3 cm and a right circular cone of slant height *l* as shown in the diagram.
  - **a** Show that the volume of the hemisphere is  $18\pi$  cm<sup>3</sup>.

The volume of the hemisphere is two-thirds that of the cone.

- **b** Find the vertical height of the cone.
- c Calculate the slant height of the cone.
- **d** Calculate the angle between the slanting side of the cone and the flat face of the hemisphere.

The sculpture is made of a material that weighs 10.8 g per cm<sup>3</sup>.

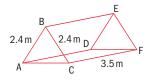

- e Calculate the weight of the sculpture, giving your answer in kg.
- **3** ABCDE is a solid glass right pyramid.

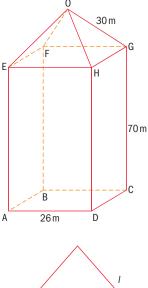

The base of the pyramid is a square of side 5 cm and center O. The vertical height is 7 cm.

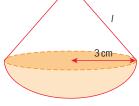

**a** Calculate the volume of the pyramid.

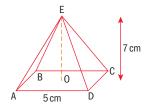

The glass weighs 8.7 grams per cm<sup>3</sup>.

- **b** Calculate the weight of the pyramid, giving your answer correct to the nearest g.
- **c** Find the length of a sloping edge of the pyramid, giving your answer correct to 4 significant figures.
- **d** Calculate the angle made between the edge ED and the base of the pyramid.
- e Calculate the size of the angle AED.
- **f** Calculate the total surface area of the pyramid.

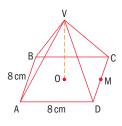

#### EXAM-STYLE QUESTION

- 4 The diagram shows a square-based right pyramid ABCDV. The midpoint of DC is M and VM is inclined at 65° to the base. The sides of the base are 8 cm and O is the center of the base.
  - **a** Find the height of the pyramid, giving your answer correct to 3 significant figures.
  - **b** Calculate
    - i the length of VM
    - ii the size of angle DVC.
  - **c** Find the total surface area of the pyramid.
  - **d** Find the volume of the pyramid, giving your answer correct to the nearest cm<sup>3</sup>.

## **CHAPTER 10 SUMMARY**

## **Geometry of three-dimensional solids**

- In a **right prism** the end faces are the same shape and size and are parallel. All the other faces are rectangles that are **perpendicular** to the end faces.
- If you cut parallel to the end face of a right prism the **cross-section** will always be the same shape and size.
- The base of a **pyramid** is a polygon. The other faces are triangles that meet at a Point called the **apex**. In a **right pyramid** the apex is vertically above the center of the base.

## Angles between two lines, or between a line and a plane

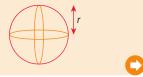

• When two faces of a solid, *X* and *Y*, are perpendicular, any line in face *X* is perpendicular to any line in face *Y*.

## Surface areas of three-dimensional solids

- The **surface area** of a solid is the sum of the areas of all its faces. Surface area is measured in square units, e.g. cm<sup>2</sup>, m<sup>2</sup>.
- Area of curved surface of a cylinder =  $2\pi rh$ Total surface area of a cylinder =  $2\pi rh + 2\pi r^2$
- Surface area of a sphere =  $4\pi r^2$

Continued on next page

- Area of curved surface of a cone =  $\pi rl$
- Total surface area of a cone =  $\pi rl + \pi r^2$

## **Volumes of three-dimensional solids**

- The volume of a solid is the amount of space it occupies and is measured in cubic units, e.g. cm<sup>3</sup>, m<sup>3</sup>, etc.
- Volume of a prism is
   V = area of cross-section × height
- Volume of a cuboid is
   V = l × w × h,
   where l is the length, w is the width, h is the height
- Volume of a cylinder is
   V = πr<sup>2</sup>h,
   where r is the radius, h is the height
- Volume of a pyramid =  $\frac{1}{3}$ (area of base × vertical height)
- Volume of a cone =  $\frac{1}{3}\pi r^2 h$ ,

where r is the radius and h is the vertical height

• Volume of a sphere  $=\frac{4}{3}\pi r^3$ , where *r* is the radius
