Venn diagrams with 3 sets

э

A D N A B N A B N A B N

The presentation will introduce two ways of representing appropriate regions on Venn diagrams with 3 sets. The fist one is done by shading regions step by step (it may require some erasing as well). In the second method we do most of the work in our heads.

Represent the set $(A \cap B') \cup C$ on a Venn diagram.

Represent the set $(A \cap B') \cup C$ on a Venn diagram.

We can start by shading $A \cap B'$ and C. We get the following diagram:

The darker colour means that this region has been shaded twice.

Tomasz Lechowski

Now we want the union \cup of these two sets, this means that we take everything that has been shaded at least once, so the answer will be:

Represent the set $(A \cup B) \cap C'$ on a Venn diagram.

Represent the set $(A \cup B) \cap C'$ on a Venn diagram.

We can start by shading $A \cup B$ and C'. We get the following diagram:

A (10) × A (10) × A (10)

Now we want the intersection \cap of these two sets, so we take everything that has been shaded twice, so the answer will be:

< 4 ₽ × <

Represent the set $B \cap (A \cap C')$ on a Venn diagram.

Represent the set $B \cap (A \cap C')$ on a Venn diagram.

We can start by shading B and $A \cap C'$. We get the following diagram:

(4 何) トイヨト イヨト

Now we want the intersection \cap of these two sets, so the answer will be:

Tomasz

э

イロト イヨト イヨト イヨト

Represent the set $B \cup (A' \cap C')$ on a Venn diagram.

Represent the set $B \cup (A' \cap C')$ on a Venn diagram.

We can start by shading B and $A' \cap C'$. We get the following diagram:

A (10) × A (10) × A (10)

Now we want the union \cup of these two sets, so the answer will be:

Tomasz

イロト イヨト イヨト 一日

Let's make some observations:

э

イロト イボト イヨト イヨト

Let's make some observations:

• $(A \cap B')$ is everything in A and not in B.

3

イロト イポト イヨト イヨト

Let's make some observations:

- $(A \cap B')$ is everything in A and not in B.
- C is of course everything in C.

3

イロト イポト イヨト イヨト

Let's make some observations:

- $(A \cap B')$ is everything in A and not in B.
- *C* is of course everything in *C*.
- Finally we have ∪ between these, so we want elements that are in at least one of the two sets.

< □ > < 同 > < 三 > < 三 >

Mark on the diagram the set corresponding to $(A \cap B') \cup C$. Answer:

2

・ロト ・四ト ・ヨト ・ヨト

イロト イヨト イヨト 一日

Let's make some observations:

Lechowski

3

< □ > < 同 > < 回 > < 回 > < 回 >

Let's make some observations:

(A∪B)' is everything outside of A and B. Using symbolic logic we could read this as: it is not true that it is in A or in B.

< □ > < 同 > < 回 > < 回 > < 回 >

Let's make some observations:

- (A∪B)' is everything outside of A and B. Using symbolic logic we could read this as: it is not true that it is in A or in B.
- C' is everything outside of C. In logic this is not in C.

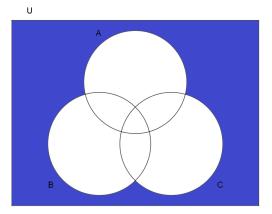

< 日 > < 同 > < 三 > < 三 >

Let's make some observations:

- (A∪B)' is everything outside of A and B. Using symbolic logic we could read this as: it is not true that it is in A or in B.
- C' is everything outside of C. In logic this is not in C.
- Finally we have ∩ between these, so we want elements that are in both sets. Using symbolic logic we have *it is not true that it is in A or in B and it is not in C.*

< 日 > < 同 > < 三 > < 三 >

Mark on the diagram the set corresponding to $(A \cup B)' \cap C'$. Answer:

Tomasz Lechowski

э

イロト イボト イヨト イヨト

Let's make some observations:

Lechowski

3

< □ > < 同 > < 回 > < 回 > < 回 >

Let's make some observations:

• $(A \cup B)$ is everything in A or in B.

3

イロト イポト イヨト イヨト

Let's make some observations:

- $(A \cup B)$ is everything in A or in B.
- $(C \cap A)$ is everything in C and in A.

3

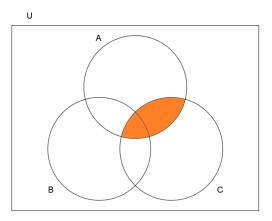

< □ > < 同 > < 回 > < 回 > < 回 >

Let's make some observations:

- $(A \cup B)$ is everything in A or in B.
- $(C \cap A)$ is everything in C and in A.
- (A∪B)∩(C∩A) is everything in both of the above so in A or in B and in C and in A.

< □ > < 同 > < 三 > < 三 >

Mark on the diagram the set corresponding to $(A \cup B) \cap (C \cap A)$. Answer:

Lechows	

3

< □ > < □ > < □ > < □ > < □ > < □ >

э

イロト 不得 トイヨト イヨト

Let's make some observations:

Lechowski

3

< □ > < 同 > < 回 > < 回 > < 回 >

Let's make some observations:

• $(A' \cap B')$ is everything that is both outside of A and outside of B.

3

イロト イポト イヨト イヨト

Let's make some observations:

- $(A' \cap B')$ is everything that is both outside of A and outside of B.
- $(B \cup C)$ is everything in B or in C.

3

イロト イポト イヨト イヨト

Let's make some observations:

- $(A' \cap B')$ is everything that is both outside of A and outside of B.
- $(B \cup C)$ is everything in B or in C.
- (A' ∩ B') ∩ (B ∪ C) is everything in both of the above so *not in* A *and not in* B *and in* B *or in* C.

< 日 > < 同 > < 三 > < 三 >

Mark on the diagram the set corresponding to $(A' \cap B') \cap (B \cup C)$. Answer:

Lechowski
